

SUCCESSFUL APPLICATIONS FIELD TRIALS

Peaches

The following products were applied as foliar treatments with 2 applications (at blooming and at petals fall) to plots replicated five times:

1. Control (equivalent volume of water)
2. Kelpgrow diluted 1:200 (2 lt./Ha)
3. Other plant growth regulator diluted 1:200 (2 lt./Ha)

Results show a crop yield increase of 33% for Kelpgrow, while the other plant growth regulator product performed a crop yield increase of 19%.
